Microbiology Lab.....	219-803-4804
Pharmacy.....	528-5881
Julie Giddens, ID Pharmacist.....	528-6557
Jacob Quinkert, ID Pharmacy Resident...	528-8903

2022 Mooreville Campus - First Isolate, All Sites																
GRAM-NEGATIVE AEROBES	# Isolates	Amikacin	Gentamicin	Tobramycin	Cefazolin	Cefuroxime	Ceftriaxone	Cefepime	Aztreonam	Imipenem/Meropenem***	Amoxicillin/clavulanate**	Ampicillin	Ampicillin/sulbactam	Piperacillin/tazobactam	Nitrofurantoin**	Trimethoprim/sulfamethox.
<b>MIC Breakpoints (mcg/ml)</b>		≤16	≤4	≤4	≤4†	≤8	≤1	≤8‡	≤8	≤1§	≤8	≤8	≤8	≤16	≤32	≤2/38
<i>Escherichia coli</i>	159	99	91	92	78	86	89	91	89	100	77	61	64	89	97	76
<i>Klebsiella pneumoniae</i>	37	100	97	97	86	95	95	95	95	100	87	-	73	89	53	89
<i>Proteus mirabilis</i>	33	100	97	97	90	91	94	94	94	100	88	82	85	94	-	85

(-) Drug not tested or drug not indicated

Only organisms with 30 or more isolates included for statistical significance and to minimize skewed results

\*\*Amoxicillin/clavulanate and nitrofurantoin urine isolates only tested. Tetracycline not consistently tested; may not represent population therefore not reported.

\*\*\* Isolates from urine tested against imipenem only. All other isolates tested against meropenem. Isolates not tested against both antibiotics.

† Cefazolin systemic MIC breakpoint of ≤4 utilized based on optimal dosing inpatient for non-urine isolates. Due to increased urinary concentrations cefazolin MIC breakpoint for UTIs is ≤16 and susceptibility may be higher

‡ Cefepime MIC breakpoint for *Gram negative pathogens* is ≤8 due to optimal dosing for inpatients.

§ Imipenem/Meropenem MIC breakpoint for Enterobacterales is ≤1

All the data is derived by including only patient's first isolate of each organism per hospital stay.

**2022 Mooresville Campus - First Isolate, All Sites**

<b>GRAM POSITIVE ISOLATES</b>	<b># Isolates</b>	<b>Ampicillin</b>	<b>Clindamycin</b>	<b>Daptomycin (≤2)</b>	<b>Daptomycin SDD (≤4)</b>	<b>Erythromycin</b>	<b>Gentamicin</b>	<b>Gentamicin Synergy</b>	<b>Linezolid</b>	<b>Nafcillin/oxacillin</b>	<b>Nitrofurantoin</b>	<b>Rifampin</b>	<b>Tetracycline</b>	<b>Trim/sulfa</b>	<b>Vancomycin</b>
<i>Enterococcus faecalis</i>	41	100	-	100	100	-	-	78	100	-	95	60	24	-	98
<i>Total Enterococcal isolates</i>	47	94	-	100	100	-	-	81	100	-	87	54	23	-	91
<i>Methicillin susceptible S. aureus</i>	36	-	90	100	-	87	97	-	100	100	-	100	88	100	100
<i>Methicillin resistant S. aureus</i>	20	-	75	100	-	13	95	-	100	0	-	95	89	95	100
<i>Total Staphylococcus aureus</i>	56	-	91	100	-	61	96	-	100	64	-	98	88	98	100

\* Vancomycin: susceptibility 98% with MIC≤1

A. Serious enterococcal infections usually require combination therapy with ampicillin+gentamicin or vancomycin+gentamicin if susceptible. infections.

Gentamicin or Streptomycin should only be used with a cell wall active antibiotic when treating serious enterococcal infections

B. Some antibiotics only tested for certain isolates: Nitrofurantoin (urine), daptomycin (non-respiratory), linezolid and rifampin (non-urine)

C. Only a portion of enterococcal isolates were tested for linezolid, nitrofurantoin, and gentamicin.

D. Daptomycin breakpoint for *Enterococcus spp.* is ≤2; increased daptomycin (8-12 mg/kg) doses in serious infections may cover MIC of 2-4 (SDD: susceptibility 100%).

## Empiric Antimicrobial Recommendation

Type of infection		Antibiotics	Duration of Therapy (Dependent on Clinical Response)
CAP (inpatient)	1st Line	ampicillin/sulbactam + doxycycline	5 days
CAP (outpatient)	1st Line	doxycycline <b>OR</b> amoxicillin + doxycycline	5 days
CAP with PSA risk (inpatient)	1st Line	piperacillin/tazobactam + tobramycin + doxycycline +/- vancomycin	5-7 days
UTI (inpatient)*	1st Line	ampicillin + gentamicin	3-5 days
	2nd Line	PCN allergy: gentamicin	3-5 days
UTI (VRE)	1st Line	amoxicillin <b>OR</b> nitrofurantoin	5 days
	2nd Line	fosfomycin	1 day
UTI (outpatient)	1st Line	nitrofurantoin <b>OR</b> amoxicillin/clavulanate	5 days
	2nd Line	cephalexin	5 days
Intra-abdominal (community)	1st Line	cefazolin + metronidazole	4-7 days with adequate source control
	2nd Line	ampicillin/sulbactam + gentamicin	4-7 days with adequate source control
Intra-abdominal (outpatient)	1st Line	amoxicillin/clavulanate	4-7 days with adequate source control
	2nd Line	cephalexin + metronidazole	4-7 days with adequate source control
SSTI (inpatient)	1st Line	cefazolin + vancomycin	5-7 days
	2nd Line	ampicillin/sulbactam + vancomycin	5-7 days
SSTI (outpatient)	1st Line	cephalexin ± SMP/TMX	5-7 days
	2nd Line	doxycycline or minocycline	5-7 days

CAP: community-acquired pneumonia, PCN: penicillin, PSA: *Pseudomonas aeruginosa*, SSTI: skin/soft tissue infection, UTI: urinary tract infection, VRE: vancomycin-resistant *Enterococcus*

\*Oxychlorosene (Clorpectin) has activity against all microbes and may be used as empiric or targeted therapy in patients with urinary catheters
